

# Technical School of Paphos – Cipru

[www2.cytanet.com.cy/techpaph](http://www2.cytanet.com.cy/techpaph)

Hello everyone !!!

I hope that you are all well and that you have started getting used to the school life again.

In the next few lines I will try to give a brief presentation of our school.

It is a Technical and Vocational school at secondary level (15 to 18 years old).

Our main options are:

- Mechanical Engineering
- Electrical Engineering
- Civil and Architecture
- Computer Engineering
- Graphic Design
- Hotel catering.....

Some information regarding the use of ICT in the school.

We have 130 computers at the school and the number is growing. If you consider the number of pupils at the school (about 525 pupils) I think it is a good ratio.

About 60 computers are connected to the internet with ADSL lines.

Pupils are doing a two hour per week course in computing in the first year of their secondary education but they also have computers for three years (12, 13 and 14 years old at the Gymnasium).

Therefore they are capable of using them very well. Some courses that are doing are:

- Introduction to computing
- Word Processing
- Excel, Power point
- Using the internet
- Building Website

Since in the school we have the specialization in Computer Engineering, some pupils in this area are working with Pascal, Microprocessors, Networks, Digital computing and peripheral devices.

Also in all specialization they are using computers in different subjects.

Some teachers are using computers in their classes but there is still a lot of work to do in order to persuade more to use them.
